EXPERIENCE

MediReach - Last-Mile Medicine Availability & Coordination

MediReach

09/2026 - 09/2026

- Last-Mile Medicine Availability & Coordination
- Python FastAPI SQLite
- Built a medicine availability coordination system connecting users with pharmacies through availability information and confirmation requests
- Implemented medicine search and pharmacy-side confirmation flow, with confirmed availability persisted in SQLite
- Designed an Availability Confidence concept to communicate the reliability of availability information

Smart File Organizer - Automated File Management & Analytics

- Developed a recursive file organizer that categorizes files by extension/type and maintains file metadata in SQLite
- Added scanning, validation, configuration, logging, dry-run/undo-oriented workflow, and database querying capabilities
- Added a FastAPI/Pydantic backend layer for exposing file records, filters, statistics, and analytics through APIs

Contributor

Gssoc

01/2026 - 12/2026

- Participating in open-source contribution
- AI-agent development

Machine Learning Advanced DSA

EDUCATION

B.Tech. — Computer Science & Engineering (Artificial Intelligence & Machine Learning)

Vellore Institute of Technology

08/2026 - 05/2030 Vellore, India

PROJECTS

MediReach

Present

Last-Mile Medicine Availability & Coordination

- Built a medicine availability coordination system connecting users with pharmacies through availability information and confirmation requests.
- Implemented medicine search and pharmacy-side confirmation flow, with confirmed availability persisted in SQLite.
- Designed an Availability Confidence concept to communicate the reliability of availability information.

SUMMARY

First-year B.Tech CSE (AI & ML) student with hands-on experience in Python backend development, REST APIs, SQL/PostgreSQL, data analysis, Git/GitHub, and FastAPI. Built practical software projects and actively contribute to open source through GSSoC 2026. Interested in backend engineering, AI/ML, and software engineering.
